INTRODUCTION

Definitions: Efforts made to maintain or restore physical, mental, or emotional well-being especially by trained and licensed professionals —usually hyphenated when used attributively health-care providers

Learner's definition of Health Care: The prevention or treatment of illness by doctors, dentists, psychologists, etc.

Medicine, the practice concerned with the maintenance of health and the prevention, alleviation, or cure of disease.

The World Health Organization at its 1978 international conference held in the Soviet Union produced the Alma-Ata Health Declaration, which was designed to serve governments as a basis for planning health care that would reach people at all levels of society. The declaration reaffirmed that health, which is a state of complete physical, mental and social well-being, and not merely the absence of disease or infirmity, is a fundamental human right and that the attainment of the highest possible level of health is a most important world-wide social goal whose realization requires the action of many other social and economic sectors in addition to the health sector.

Kind Of Medicines:

It is a well-known fact that Traditional Systems of medicines always played important role in meeting the global health care needs. They are continuing to do so at present and shall play major role in future also. The system of medicines which are considered to be Indian in origin or the systems of medicine, which have come to India from outside and got assimilated in to Indian culture are known as Indian Systems of Medicine (Prasad, 2002). India has the unique distinction of having six recognized systems of medicine in this category. They are-Ayurveda, Siddha, Unani and Yoga, Naturopathy and Homoeopathy. Though Homoeopathy came to India in 18th Century, it completely assimilated in to the Indian culture and got enriched like any other traditional system hence it is considered as part of Indian Systems of Medicine (Prasad, 2002). Apart from these systems- there are large number of healers in the folklore stream who have not been organized under any category. In the present review, attempt would be made to provide brief profile of three systems to familiarize the readers about them so as to facilitate acquisition of further information.

The other major initiatives were establishment of a research Institute to take care of the R & D needs (Central Institute of Research in Indigenous System of Medicine (CIRISM)- in 1955); a Post Graduate Training Centre of Ayurveda in 1956- to impart Post graduate education; establishment of a University-named Gujarat Ayurved University at Jamnagar in the Gujarat State in 1967; creation of Central Council of Indian Medicine (CCIM) in 1972 for regulating Education and Registration in Ayurveda, Siddha and Unani systems of medicine. A research council named Central Council for Research in Indian Medicine, Homoeopathy and Yoga (CCRIMH) was established in 1971. Subsequently, this council was bifurcated to create three separate councils -Central Council for Research in Ayurveda & Siddha (CCRAS), Central Council for Research in Unani Medicine (CCRUM), Central Council for Research in Homoeopathy (CCRH) and Central Council for Research in Naturopathy and Yoga (CCRN). National Institute of Ayurveda (NIA) was established at Jaipur in Rajasthan state. Recently another University has been established known as Rajasthan Ayurved University- Jodhpur (Rajasthan state). A draft national policy for the development of Indian System of Medicine has been prepared which is available on the web site of Department of Ayurveda.

II. OBJECTIVES OF THE STUDY:

On the basis of variables, The Researcher framed objectives from the following.

1. To identify the diseases of cure by using different kinds of medicines among weavers Community to their Gender.
2. To find out the knowledge of diseases cure to have been used different types of Medicines to their Age.
3. To know the Awareness of diseases cure for using various kind of Medicines, according to Income of the Family.

III. HYPOTHESIS OF THE STUDY:

The Investigator have written Hypothesis with the Objectives of the topic.

1. There would not be significant difference between the Male and Female among Weavers Community of diseases cure by using different kinds of medicines.
2. They do not significance difference between the different Age group of Community Weavers regarding to diseases cure by using different kinds of medicines.
3. Weavers of the Community people, do not differ significance between the Income Status of the Family to diseases cure by using different kinds of medicines.

IV. SAMPLE OF THE DATA

The Investigator has been collected the data of diseases of cure by using different kinds of medicines in Kallur (Mandal) at Kurnool Town from Weavers Community of 140 samples to their Gender, Different Age Groups and Income of the family. They should be used Simple Random sampling Method for making Sample Design.

V. SAMPLE DESIGN OF THE STUDY:

The sample Design did show from the following.

Table-1: Sample Design of the study

Gender	Age Groups		Total
	31 to 35Years	36 to 40 years	
Male	35	35	70
Female	35	35	70
Total	70	70	140

VI. TOOL FOR THE STUDY

The Researcher conducted the interview scale about diseases cure by using different kinds of medicines.

VII. STATISTICAL TECHNIQUES USED:

The data was analysed using relevant statistical techniques are The descriptive statistics like Mean, Median, Mode, S.D, 't' test and correlation etc., to find out whether the differences in the independent variables accounted for significant differences in the dependent variables. The usual levels of significance viz., 0.05 levels had employed to test the significance of the obtained values.

VIII. STATISTICAL ANALYSES AND INTERPRETATION OF THE DATA

Hypothesis 1: To find out whether significance differences between the Male and Female of Weavers Community of diseases cure by using different kinds of medicines.

Table-2: Mean, Median and S.D value of Weavers Community of diseases cure by using different kinds of medicines, According to Gender.

Gender	Mean	Median	S.D
Male	53.73	52	5.77
Female	56.04	56	6.74

On the above Table-2 Indicates that Females were the values of Mean (56.04), Median(56) and S.D(6.74) as well as Males values of Mean (53.73), Median(52) and S.D(5.77). When, the results suggest that Females have more Diseases cures than the Males in all aspects to their using different kinds of Medicines of the Weavers community society. Therefore, It refers to Males have less knowledge of Diseases cure than the females by using different kinds of Medicines in Weavers Community society.

Hypothesis 2: To find out whether significance differences between the different Age group of Weavers Community regarding to diseases cure by using different kinds of medicines.

Table-3: Mean, S.D and 't'-value of Age group of Weavers Community regarding to diseases cure by using different kinds of medicines.

Group of Age	Mean	S.D	't'-value
31 to 35 years	54.50	5.61	@0.72 Not significant
36 to 40 years	55.27	7.05	

Note: @'t' value is Not Significant at 0.05 level

It could be denote that the obtained 't' value 0.72 is less than the 't' table value of 1.98 for Two tailed test and Not significant at the 0.05 level. The Null hypothesis was accepted. It thus implies that the Obtained correlation is not significant. This reveals that "There is no significant difference between the different Age group of Weavers Community regarding to diseases cure by using different kinds of medicines".

Hence, the hypothesis "There is no significant difference between the different Age group of Weavers Community regarding to diseases cure by using different kinds of medicines" was accepted. It is also concluded that there exists no relationship between Age group of Weavers Community regarding to diseases cure by using different kinds of medicines.

Hypothesis 3: To find out the significance differences between levels of the Income of Weavers Community to their diseases cure by using different kinds of medicines

ADVANCE RESEARCH JOURNAL OF MULTIDISCIPLINARY DISCOVERIES

Table-4: Mean, Median and S.D value of Weavers Community of diseases cure by using different kinds of medicines with their Income of the Family.

Income of the Family	Mean	Median	S.D
Below 50000	54.37	52	6.23
Above 51000	56.01	54	6.48

With the reference of table -4 denotes that The Mean(54.37) ,Median(52) and S.D(6.23) value of Income of the families had earn below Rs 50,000 as Well as Those people of Weavers Communities were earn of above Rs 51,000 regarding the values of Mean(56.01),Median(54) and S.D(6.48). The result should be observed that reveals Those who are earn Above Rs 51,000 have more significant than the Weaver Community people of diseases cure by using different kinds of medicines.

Thus, the result analysis revealed that people who are earn the above Rs 51,000 Income which indicate, Weavers community people who have High Understanding abilities to diseases cure by using different kinds of medicines.

Therefore, Below 50,000 earning people were less scores of Income Family belong to Weavers community, According to their Income status of the Family.

IX. CONCLUSION

This Research makes strengthen about using different kinds of medicines to cure their Diseases. As per statistical Analysis, Weavers Community people have not sufficient knowledge to take treatment to cure their diseases by using different kinds of medicines.

Findings: As a result based ,findings can be show as below

1. Males have less knowledge of Diseases cure than the females by using different kinds of Medicines in Weavers Community.
2. There exists no relationship between Age group of Weavers Community regarding to diseases cure by using different kinds of medicines
3. Weaver’s community people who are earning Income of below Rs50, 000 have less knowledge to cure their diseases by using different kinds of medicines.

X. RECOMMENDATIONS:

On the whole of Analysis, Wavers community people were need the Knowledge for Heal diseases by using different kinds of medicines. The following Recommendations mentioned in order to Health care education.

1. Every village and Mandal level should be conducting Awareness of Health programmes by the Government.
2. Doctors to be bring knowledge about diseases cure by taking different kinds of medicines through Health campaign programmes.
3. At all Education level organised Right to Health care programmes in year twice.
4. Government interact to develop in an illness of privatisation by the Indian Constitutional provisions.
5. Implementing Strict Audit to providing Medicines from pharmaceutical industry

XI. LIMITATIONS OF THE STUDY:

1. The study was limited to only Weavers Community people.
2. The Research could be conduct in Kallur Mandal in Kurnool (DT).
3. The study had been identified and organised with the different kinds of medicines to cure their Diseases like -Ayurveda, Siddha, Unani and Yoga, Naturopathy and Homoeopathy.
